

HEART DISEASE RISK PREDICTION

TEST FORM 1

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	66	Completed age in years
Sex	F	M = Male / F = Female
ChestPainType	ATA	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	179	Resting systolic blood pressure (mmHg)
Cholesterol	286	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	188	Maximum heart rate (bpm)
ExerciseAngina	Y	N = No; Y = Yes
Oldpeak	1.0	ST-segment depression value; decimal allowed
ST_Slope	Down	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

MODERATE RISK

Heart Disease Probability: **46.0%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 2

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	37	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	ASY	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	109	Resting systolic blood pressure (mmHg)
Cholesterol	329	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	LVH	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	115	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	1.7	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

HIGH RISK

Heart Disease Probability: **70.5%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 3

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	42	Completed age in years
Sex	F	M = Male / F = Female
ChestPainType	ASY	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	179	Resting systolic blood pressure (mmHg)
Cholesterol	165	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	168	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	1.1	ST-segment depression value; decimal allowed
ST_Slope	Up	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

LOW RISK

Heart Disease Probability: **19.0%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 4

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	30	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	ATA	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	154	Resting systolic blood pressure (mmHg)
Cholesterol	181	Serum cholesterol (mg/dL)
FastingBS	1	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	113	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	0.2	ST-segment depression value; decimal allowed
ST_Slope	Up	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

LOW RISK

Heart Disease Probability: **10.0%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 5

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	56	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	NAP	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	113	Resting systolic blood pressure (mmHg)
Cholesterol	165	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	LVH	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	186	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	0.0	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

HIGH RISK

Heart Disease Probability: **69.0%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 6

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	31	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	ATA	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	171	Resting systolic blood pressure (mmHg)
Cholesterol	207	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	123	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	3.4	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

HIGH RISK

Heart Disease Probability: **76.5%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 7

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	57	Completed age in years
Sex	F	M = Male / F = Female
ChestPainType	ASY	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	155	Resting systolic blood pressure (mmHg)
Cholesterol	252	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	LVH	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	159	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	1.7	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

HIGH RISK

Heart Disease Probability: **66.0%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 8

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	78	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	ASY	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	155	Resting systolic blood pressure (mmHg)
Cholesterol	273	Serum cholesterol (mg/dL)
FastingBS	0	0 = ≤ 120 mg/dL; 1 = > 120 mg/dL
RestingECG	LVH	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	172	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	0.6	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

HIGH RISK

Heart Disease Probability: **65.0%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low** $< 30\%$, **Moderate** $30\% - < 60\%$, **High** $\geq 60\%$. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 9

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	41	Completed age in years
Sex	F	M = Male / F = Female
ChestPainType	ASY	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	158	Resting systolic blood pressure (mmHg)
Cholesterol	166	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	LVH	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	114	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	2.3	ST-segment depression value; decimal allowed
ST_Slope	Up	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

MODERATE RISK

Heart Disease Probability: **37.5%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 10

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	30	Completed age in years
Sex	F	M = Male / F = Female
ChestPainType	TA	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	120	Resting systolic blood pressure (mmHg)
Cholesterol	184	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	LVH	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	126	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	1.4	ST-segment depression value; decimal allowed
ST_Slope	Up	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

LOW RISK

Heart Disease Probability: **21.0%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 11

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	62	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	NAP	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	174	Resting systolic blood pressure (mmHg)
Cholesterol	293	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	153	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	0.8	ST-segment depression value; decimal allowed

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 20

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	71	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	NAP	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	180	Resting systolic blood pressure (mmHg)
Cholesterol	187	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	93	Maximum heart rate (bpm)
ExerciseAngina	Y	N = No; Y = Yes
Oldpeak	0.9	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

HIGH RISK

Heart Disease Probability: **82.0%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 21

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	53	Completed age in years
Sex	F	M = Male / F = Female
ChestPainType	NAP	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	155	Resting systolic blood pressure (mmHg)
Cholesterol	185	Serum cholesterol (mg/dL)
FastingBS	1	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	134	Maximum heart rate (bpm)
ExerciseAngina	Y	N = No; Y = Yes
Oldpeak	1.2	ST-segment depression value; decimal allowed
ST_Slope	Up	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

LOW RISK

Heart Disease Probability: **24.0%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

ExerciseAngina	N	N = No; Y = Yes
Oldpeak	0.4	ST-segment depression value; decimal allowed
ST_Slope	Up	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

LOW RISK

Heart Disease Probability: **22.0%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 39

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	44	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	TA	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	116	Resting systolic blood pressure (mmHg)
Cholesterol	235	Serum cholesterol (mg/dL)
FastingBS	1	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	LVH	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	165	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	1.4	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

MODERATE RISK

Heart Disease Probability: **45.5%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

RestingBP	122	Resting systolic blood pressure (mmHg)
Cholesterol	278	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	142	Maximum heart rate (bpm)
ExerciseAngina	Y	N = No; Y = Yes
Oldpeak	0.1	ST-segment depression value; decimal allowed
ST_Slope	Down	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

HIGH RISK

Heart Disease Probability: **62.0%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 58

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	76	Completed age in years
Sex	M	M = Male / F = Female

Age	72	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	NAP	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	114	Resting systolic blood pressure (mmHg)
Cholesterol	231	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	114	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	0.8	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

MODERATE RISK

Heart Disease Probability: **54.0%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 95

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	57	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	ASY	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	166	Resting systolic blood pressure (mmHg)
Cholesterol	225	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	109	Maximum heart rate (bpm)
ExerciseAngina	Y	N = No; Y = Yes
Oldpeak	0.6	ST-segment depression value; decimal allowed
ST_Slope	Down	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

HIGH RISK

Heart Disease Probability: **79.5%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 96

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	49	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	ATA	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	166	Resting systolic blood pressure (mmHg)
Cholesterol	207	Serum cholesterol (mg/dL)
FastingBS	1	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	144	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	1.2	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

HIGH RISK

Heart Disease Probability: **60.5%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 97

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	56	Completed age in years
Sex	M	M = Male / F = Female
ChestPainType	TA	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	111	Resting systolic blood pressure (mmHg)
Cholesterol	239	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	189	Maximum heart rate (bpm)
ExerciseAngina	Y	N = No; Y = Yes
Oldpeak	1.8	ST-segment depression value; decimal allowed
ST_Slope	Flat	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

MODERATE RISK

Heart Disease Probability: **55.5%**

Predicted Class: **1** (Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 98

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	51	Completed age in years
Sex	F	M = Male / F = Female
ChestPainType	NAP	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	106	Resting systolic blood pressure (mmHg)
Cholesterol	310	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	142	Maximum heart rate (bpm)
ExerciseAngina	N	N = No; Y = Yes
Oldpeak	0.5	ST-segment depression value; decimal allowed
ST_Slope	Up	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

LOW RISK

Heart Disease Probability: **5.5%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 99

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	31	Completed age in years
Sex	F	M = Male / F = Female
ChestPainType	ATA	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	120	Resting systolic blood pressure (mmHg)
Cholesterol	241	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	Normal	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	157	Maximum heart rate (bpm)
ExerciseAngina	Y	N = No; Y = Yes
Oldpeak	1.4	ST-segment depression value; decimal allowed
ST_Slope	Down	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

MODERATE RISK

Heart Disease Probability: **33.0%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.

HEART DISEASE RISK PREDICTION

TEST FORM 100

Complete input case with actual model output

Patient Input Form

Feature	Value to Enter	Information
Age	35	Completed age in years
Sex	F	M = Male / F = Female
ChestPainType	NAP	ATA = Atypical Angina; NAP = Non-Anginal Pain; ASY = Asymptomatic; TA = Typical Angina
RestingBP	119	Resting systolic blood pressure (mmHg)
Cholesterol	158	Serum cholesterol (mg/dL)
FastingBS	0	0 = <=120 mg/dL; 1 = >120 mg/dL
RestingECG	ST	Normal; ST = ST-T wave abnormality; LVH = Left Ventricular Hypertrophy
MaxHR	118	Maximum heart rate (bpm)
ExerciseAngina	Y	N = No; Y = Yes
Oldpeak	0.6	ST-segment depression value; decimal allowed
ST_Slope	Up	Up = Upsloping; Flat = Flat; Down = Downsloping

Actual Model Output

LOW RISK

Heart Disease Probability: **24.5%**

Predicted Class: **0** (No Heart Disease)

This output was calculated directly from the uploaded heart_disease_model.pkl file.

Important: The percentage above is the model's predicted probability for class 1. The Low / Moderate / High labels are the application's presentation bands: **Low < 30%**, **Moderate 30%–<60%**, **High ≥60%**. These bands are not clinical diagnostic thresholds.

How to verify: Enter the 11 values from this page into the Streamlit application. Because the same uploaded model is used, the prediction and probability should correspond to the values shown here.

Data status: Synthetic test data for software demonstration only. Not real patient records.
